

Automated Business Report

Executive Summary

Executive Summary - Household Power Consumption Analysis

This report analyzes 5000 records of household power consumption data.

Key Findings:

- Average Global Active Power: 1.72 kilowatts
- Peak Power Consumption: 7.84 kilowatts
- Minimum Power Consumption: 0.19 kilowatts
- Average Voltage: 240.97 volts

The data indicates typical household energy usage patterns with power consumption ranging from 0.19 kW to 7.84 kW. Average consumption of 1.72 kW suggests moderate energy usage throughout the recorded period.

Recommendation: Monitor peak usage hours to optimize energy consumption and reduce costs.
